CLINICAL FOCUS

The clinical focus of Dr. Buluç lies in anesthesiology and reanimation care. In the anesthesiology setting, his work begins before the procedure itself.

Preoperative preparation involves reviewing the patient's medical history, current medications and existing reports so that the anesthetic plan can be adapted to the individual patient and the planned procedure.

During the procedure, patient monitoring is a central part of his role. Vital functions are observed continuously so that the anesthetic can be adjusted as needed and any changes can be addressed promptly. After the procedure, recovery care covers the period in which the patient wakes from anesthesia, with ongoing observation and management of comfort until the patient is stable enough to return to the ward.

INTERNATIONAL PATIENTS

Dr. Buluç speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. For international patients, the Acibadem international patient team coordinates the collection of prior reports and imaging, for example MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments...
