HOSPITAL  
Acibadem Adana Hospital

DEPARTMENT  
Dental & Oral Health

## CLINICAL FOCUS

A significant part of Dr. Bayram's practice is preventive. She provides guidance on preventive options for children, including fluoride application to support tooth enamel, fissure sealants to protect the grooves of molars, and space maintainers, which are used when a primary tooth is lost early to help preserve room for the permanent tooth that will follow.

Her restorative and treatment work covers dental fillings for decayed or damaged teeth, the management of dental root infection, and root canal treatment for both primary teeth and permanent teeth. Dr. Bayram also treats dental trauma in children, such as injuries to the teeth following falls or accidents, and performs tooth extraction when a tooth cannot be preserved.

Space maintainers

Root canal treatment for primary teeth

Root canal treatment for permanent teeth

Dental treatment under general anesthesia

Fluoride application

## INTERNATIONAL PATIENTS

Dr. Bayram speaks Turkish and English, and interpreters can be arranged for families who speak other languages. The Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, previous treatment records, and discharge summaries, and arranges appointments and the hospital visit.

## CONDITIONS TREATED

Dental root infection
