CLINICAL FOCUS

A significant part of Dr. Uçmak's practice involves lower respiratory tract infections, including bronchitis and pneumonia. Evaluation typically begins with a review of symptoms and medical history, followed by a clinical examination and laboratory testing to help identify the likely cause of infection and guide treatment decisions. Where appropriate, he advises on the expected duration of treatment and on follow-up testing.

Dr. Uçmak also sees patients with sexually transmitted infections, including syphilis and HPV, as well as those with hepatitis and HIV and AIDS, where diagnosis, monitoring and ongoing management are often long-term processes that require regular laboratory review.

INTERNATIONAL PATIENTS

Dr. Uçmak consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as laboratory and pathology results, X-ray or CT reports, operative notes and discharge summaries, and arranges appointments and the hospital visit.
