Hospital, İstanbul

DEPARTMENT

Orthopedics & Joint Center

CLINICAL FOCUS

Dr. Kaya's clinical work centers on the diagnosis and surgical treatment of joint diseases and injuries. He performs hip replacement and knee replacement surgery for patients with advanced joint disease, and robotic surgery forms part of his practice in joint surgery.

He also treats orthopedic trauma and undertakes deformity correction surgery and limb lengthening. Each treatment plan is based on the individual patient's clinical findings, imaging, and general health, and surgery is considered only where it is appropriate for the patient's condition. Non-surgical options are discussed where relevant.

Anterior cruciate ligament tears

Deformity correction surgery

Joint diseases

Hip replacement surgery

Knee replacement surgery

CONDITIONS TREATED

Anterior cruciate ligament tears

Joint diseases
