DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Aydın's work is centered on diagnostic radiology. A significant part of his practice involves ultrasound imaging, including abdominal ultrasound, thoracic ultrasound and Doppler ultrasound, which is used to assess blood flow in vessels and organs. He also interprets cross-sectional studies such as MRI and CT, and reports conventional X-ray imaging and fluoroscopy examinations.

His areas of expertise further include head and neck imaging, mammography for the evaluation of breast tissue, and musculoskeletal radiology, which addresses the bones, joints and soft tissues. In each of these areas, the radiologist's role is to select the appropriate imaging protocol, review the acquired images and provide a written report that the referring physician can use in planning further assessment or treatment.

INTERNATIONAL PATIENTS

Dr. Aydın speaks Turkish and English, and interpreters can be arranged for patients who prefer another language. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, for example earlier MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and...
