CLINICAL FOCUS

One area of Dr. Torun's work is the treatment of teeth grinding. After an examination of the teeth, jaw and bite, options that may be discussed include a custom night guard to protect the teeth during sleep or Botox for teeth grinding, which is aimed at reducing the activity of the muscles involved. Which approach is suitable, if any, depends on the individual findings and is decided together with the patient.

In aesthetic dentistry, Dr. Torun offers laminate veneers, composite bonding, porcelain dental restorations and zirconia restorations. These procedures are used to restore worn, chipped or discolored teeth and to address concerns about the shape or color of the teeth; the choice between them depends on the condition of the teeth, the extent of the problem and the patient's expectations.

Teeth grinding treatment

INTERNATIONAL PATIENTS

Dr. Torun consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging, for example dental X-ray reports, previous treatment records, laboratory results and discharge summaries, and arranges appointments and the hospital visit.
