Acibadem Ankara Hospital

DEPARTMENT
Dental & Oral Health

CLINICAL FOCUS

The core of Dr. Öcal's practice is the prevention and treatment of dental disease in children. Preventive care includes fluoride application and fissure sealants, which are intended to reduce the risk of caries in developing teeth. When decay or infection is present, she carries out dental fillings, manages tooth root infection, and performs root canal treatment in both primary and permanent teeth.

Dr. Öcal also treats dental trauma in children, which may involve chipped, displaced or lost teeth following falls or accidents, and she offers aesthetic pediatric dentistry for the appearance of children's teeth. For young or anxious patients, or for those requiring extensive treatment, dental treatment under general anesthesia can be considered following an individual assessment.

Space maintainers

Root canal treatment for primary teeth

Root canal treatment for permanent teeth

Dental treatment under general anesthesia

Fluoride application

INTERNATIONAL PATIENTS

Dr. Öcal consults in Turkish and English, and interpreters can be arranged for families who speak other languages. The Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays and previous treatment records, arranges appointments and organises the hospital visit.

CONDITIONS TREATED

Tooth root infection
