CLINICAL FOCUS

A substantial part of Dr. Doğan's clinical and research work relates to breast cancer, including early-stage disease and HER2-positive metastatic disease. He also treats gastrointestinal cancers, lung and other thoracic cancers, urological cancers, gynecological tumors, central nervous system tumors and endocrine pancreatic tumors.

Treatment planning in his practice draws on immunotherapy and targeted therapies, informed by his interests in molecular pathology and cancer screening. The choice of systemic treatment depends on the tumor type, stage, molecular features and the patient's general condition, and is discussed with each patient on an individual basis.

Breast cancer Gastrointestinal oncology Lung and thoracic cancers
Urological cancers Gynecological tumors

CONDITIONS TREATED

Breast cancer Lung and thoracic cancers Urological cancers
Gynecological tumors Central nervous system tumors
