Pediatrics

CLINICAL FOCUS

A large part of Dr. Mutluay's work is preventive: well-child follow-up, in which growth, development and general health are reviewed at regular intervals during childhood and adolescence. He also sees children with everyday complaints, including upper respiratory tract infections, croup, gas pain in infants and children, and constipation.

Dr. Mutluay also evaluates children with recurrent or less common conditions. These include PFAPA syndrome, which is characterized by periodic episodes of fever, and Kawasaki disease, an inflammatory condition of childhood that requires timely recognition and follow-up.

PFAPA syndrome

Constipation in children

Iron deficiency and anemia in children

Kawasaki disease

Child and adolescent health

INTERNATIONAL PATIENTS

Dr. Mutluay consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging, such as laboratory and pathology results, ultrasound or X-ray reports, previous prescriptions and discharge...

CONDITIONS TREATED
