CLINICAL FOCUS

Dr. Sayman's clinical work is in emergency care. His role is to assess patients who present with urgent medical problems, to determine how serious the situation is, and to decide which steps should follow. This typically begins with a focused history of the presenting complaint and the patient's relevant medical background, followed by a clinical examination.

In an emergency setting, priorities are set according to the urgency of each patient's condition. Dr. Sayman aims to explain what has been found, what is being recommended, and why, so that patients and their families understand the situation and the plan. The exact course of evaluation and treatment is determined by the individual patient's condition and cannot be defined in advance.

INTERNATIONAL PATIENTS

Dr. Sayman speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. The hospital's international patient team coordinates the collection of prior reports and imaging, such as MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the hospital visit.
