CLINICAL FOCUS

Interventional radiology uses imaging guidance, such as ultrasound, CT or angiography, to carry out targeted procedures through small punctures rather than open surgery. The areas of expertise listed in Dr. Güven's profile are interventional radiology in general and transarterial radioembolization (TARE) in particular.

Case selection relies on current imaging. Cross-sectional and functional studies, which may include PET-CT imaging, are commonly reviewed as part of the work-up before an interventional procedure is planned, alongside laboratory results and the patient's clinical history. In some cases additional imaging is requested before a final recommendation can be given.

INTERNATIONAL PATIENTS

Dr. Güven consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, for example MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the...
