İstanbul

DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Çelik's practice is devoted to diagnostic imaging. Magnetic resonance imaging uses a strong magnetic field and radio waves to produce detailed cross-sectional images of the body without ionizing radiation, and is frequently used to assess soft tissues, joints, the brain and the spine.

In each of these modalities, the radiologist's role is to review the acquired images, describe the findings in a structured report and, where appropriate, recommend additional imaging or correlation with clinical and laboratory information. Dr. Çelik works alongside the referring physicians, and his reports form part of the information those physicians use when discussing diagnosis and possible next steps with the patient.

Magnetic Resonance Imaging (MRI)

Computed Tomography (CT)

Ultrasonographic Imaging

INTERNATIONAL PATIENTS

Dr. Çelik consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. The Acibadem international patient team coordinates the collection of prior reports and imaging, arranges appointments and organizes the hospital visit.
