DEPARTMENT
Thoracic Surgery Department

CLINICAL FOCUS

Dr. Subaşı's clinical interests include lung cancer and other thoracic cancers, as well as chest wall tumors. He performs lung surgery, including single-port VATS, a video-assisted technique carried out through a single small incision, where this approach is considered appropriate for the individual patient.

A further area of his practice is the treatment of pneumothorax, a condition in which air collects between the lung and the chest wall. He also treats chest wall deformities, namely pectus excavatum and pectus carinatum, and disorders of the diaphragm.

Bronchoscopy Lung surgery Single-port VATS Pneumothorax

Pectus excavatum

CONDITIONS TREATED

Lung surgery Pneumothorax Pectus excavatum

Pectus carinatum Chest wall tumors
