Hospital, Muğla

DEPARTMENT
Cardiovascular Surgery

CLINICAL FOCUS

Dr. Özkan evaluates and surgically treats aortic aneurysm, aortic valve stenosis and other heart valve diseases, as well as ventricular septal defect (VSD).

Treatment decisions in these conditions depend on the individual findings, and not every patient assessed will be a candidate for surgery.

In vascular surgery, his areas of expertise include major vessel diseases, peripheral arterial occlusion and Buerger disease. He also treats venous conditions, including venous insufficiency and varicose veins. The appropriate approach is determined after a review of the patient's history, examination findings and imaging.

Aortic aneurysm

Aortic valve stenosis
