CLINICAL FOCUS

The core of Dr. Yörübulut's practice is the performance and interpretation of magnetic resonance imaging (MRI) and computed tomography (CT). Both are cross-sectional imaging methods used to examine different regions of the body, and his published work reflects experience with MRI of the musculoskeletal system as well as functional MRI.

A further area of expertise is multidetector CT colonography, also referred to as virtual colonoscopy, a CT-based examination of the colon. Dr. Yörübulut also has an interest in virtual angiography, in which images of blood vessels are reconstructed from CT or MRI data.
