Acibadem Kozyatagi
Hospital, İstanbul

DEPARTMENT
Pediatrics

CLINICAL FOCUS

A substantial part of Dr. Acar's work concerns the first months of life. She follows newborns after birth, evaluates and manages newborn jaundice, and assesses infants with colic or suspected infant lactose intolerance. Feeding and growth are reviewed as part of pediatric nutrition monitoring, so that concerns about weight gain, tolerance of milk or the introduction of foods can be addressed with the family.

For older children and adolescents, Dr. Acar provides well-child follow-up and general child and adolescent health care. She diagnoses and treats childhood infectious diseases, including upper respiratory tract infections in children, and evaluates urinary incontinence in children. Her areas of expertise include:

Infant lactose intolerance Infant colic Child and adolescent health
Urinary incontinence in children
Upper respiratory tract infections in children

INTERNATIONAL PATIENTS

Dr. Acar consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports, such as laboratory results, growth and vaccination records, imaging reports and discharge summaries, and arranges the appointment and the hospital visit.

CONDITIONS TREATED

Infant colic Upper respiratory tract infections in children
Urinary incontinence in children Newborn jaundice
