CLINICAL FOCUS

Dr. Kara's clinical work falls within general oral and dental health. A typical consultation begins with a clinical examination of the teeth, gums and soft tissues of the mouth, together with a review of any dental imaging the patient already has. On this basis, she discusses the findings with the patient and explains which treatment options may be considered and in what order.

For patients who are researching implant-based approaches before their visit, this site provides general information on zygomatic implants. Whether any given approach is appropriate for an individual patient can only be determined after a clinical examination and a review of that patient's imaging.

INTERNATIONAL PATIENTS

Dr. Kara consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging — for example X-ray and CT reports, laboratory results, operative notes and discharge summaries — and arranges appointments and the hospital visit itself.
