CLINICAL FOCUS

A large part of Dr. Aladağ's work involves the care of newborns and infants. This includes newborn follow-up, the assessment of newborn jaundice, and the evaluation of feeding-related complaints such as infant colic, gas pain and infant lactose intolerance.

In older infants and children, she assesses iron deficiency and anemia, which may be identified during routine checks or after a family raises a concern. She also evaluates hematuria (blood in the urine) and urinary incontinence in children, and follows children with growth disorders.

Infant lactose intolerance

Iron deficiency in children

Anemia in children

Hematuria in children

Infant colic

INTERNATIONAL PATIENTS

Dr. Aladağ consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports, such as laboratory results, ultrasound reports, discharge summaries and any records of previous treatment, arranges the appointment and organises the hospital visit.

CONDITIONS TREATED

Iron deficiency in children

Anemia in children

Hematuria in children

Infant colic
