CLINICAL FOCUS

A substantial part of Dr. Kabakcı's practice is urogynecology, including the assessment of pelvic floor and bladder concerns and the treatment of urinary incontinence. She also evaluates and treats sexual dysfunction and provides care for women with menopause-related symptoms.

Her obstetric work includes pregnancy follow-up and childbirth, and she also addresses fertility questions and genital aesthetics. The approach chosen in each case depends on the individual patient's history, examination findings and personal priorities, and treatment planning is discussed with the patient before any decision is made.
