CLINICAL FOCUS

Dr. Bulut's work is directed at breast disease imaging. She performs and interprets mammography, magnetic resonance imaging of the breast and ultrasound imaging, and she is involved in the imaging assessment of patients with suspected or confirmed breast cancer.

Her practice also covers benign breast conditions. Breast cysts and mastitis are evaluated with imaging methods appropriate to the clinical question, most often ultrasound imaging, and, where indicated, mammography or magnetic resonance imaging. In addition to breast imaging, her areas of expertise include virtual angiography, a non-invasive imaging approach to the visualization of blood vessels.

INTERNATIONAL PATIENTS

Dr. Bulut speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as previous mammography, ultrasound or MRI reports, laboratory and pathology results and discharge summaries, and arranges appointments and the hospital visit.
