CLINICAL FOCUS

Dr. Doygun evaluates and treats a range of intracranial conditions. These include brain tumors such as meningioma, surgery for brain metastasis, and the treatment of pituitary disease, for which he performs endoscopic pituitary and skull base surgery. He also manages hydrocephalus, intracranial hemorrhage and hematoma.

His spinal practice addresses lumbar and cervical spinal canal stenosis, back, neck and low back pain associated with disc herniation, lumbar hypolordosis, and tethered cord syndrome. Assessment typically involves correlating the patient's symptoms and neurological examination findings with imaging before a treatment recommendation is given.

Meningioma

Lumbar and cervical spinal canal stenosis

Pituitary disease treatment

Hydrocephalus

Hematoma

INTERNATIONAL PATIENTS

Dr. Doygun consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as MRI, CT and X-ray reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the hospital visit.
