CLINICAL FOCUS

Dr. Türkkan assesses and treats gum disease across its stages, from gum bleeding and inflammation to more advanced conditions such as gum abscess and gum recession. She also manages peri-implantitis, an inflammatory condition affecting the tissues around dental implants, and provides dental calculus removal as part of periodontal care.

Her work also includes laser gum treatment, which may be considered for selected periodontal conditions, and gum aesthetics. For patients who feel that too much gum tissue shows when they smile, she offers gummy smile treatment with botulinum toxin.
