Ophthalmology

CLINICAL FOCUS

A large part of Dr. Beyazal's work concerns conditions that affect vision over time. He assesses and treats cataract, in which the natural lens of the eye becomes cloudy, and glaucoma, a condition that can damage the optic nerve and is usually monitored with regular examinations.

Refractive errors form another area of his practice. Dr. Beyazal evaluates and treats myopia (short-sightedness), hyperopia (long-sightedness) and astigmatism. He also sees patients with strabismus, a misalignment of the eyes, and discusses the options that are relevant to the patient's age, examination results and symptoms.
