DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Orman's work centers on diagnostic imaging. Magnetic resonance imaging (MRI) uses magnetic fields and radio waves to produce detailed images of soft tissues and organs without ionizing radiation. Computed tomography (CT) combines X-ray images taken from different angles to create cross-sectional views of the body.

As a radiologist, Dr. Orman performs and interprets these examinations and prepares reports that support the referring physician's diagnosis and treatment planning. The choice of imaging method takes into account the patient's history, symptoms and any previous examinations, and is decided together with the treating team.
