CLINICAL FOCUS

A large part of Dr. Çağlar's work concerns the first months of life. He evaluates newborns with jaundice, carries out and interprets newborn screening tests, and advises families on infant colic and infant lactose intolerance.

In older infants and children, Dr. Çağlar manages upper respiratory tract illnesses, which are among the most frequent reasons for a pediatric visit, and investigates childhood anemia, including iron deficiency, with appropriate laboratory testing and dietary or medical treatment.

Infant colic · Infant lactose intolerance · Childhood iron deficiency
Childhood anemia · Childhood urinary incontinence

CONDITIONS TREATED

Infant colic · Childhood iron deficiency · Childhood anemia
Childhood urinary incontinence
Upper respiratory tract illnesses in children
