CLINICAL FOCUS

Dr. Toprak's surgical practice includes head and neck surgery, middle ear surgery and nasal surgery. He performs septoplasty for a deviated nasal septum and septorhinoplasty when functional and structural correction of the nose are addressed together.

Beyond surgery, he evaluates and manages vertigo and balance disorders, hearing loss in children and voice hoarseness. Each patient is assessed on the basis of symptoms, examination findings and any existing investigations, and the treatment plan, whether medical or surgical, is discussed with the patient before any decision is made.
