CLINICAL FOCUS

Dr. Yavuz's clinical work covers the three areas listed in his profile. Anesthesia assessment refers to the evaluation of a patient before a planned procedure. In general terms, this evaluation looks at the patient's medical history, current medications, previous experiences with anesthesia and relevant test results, so that the anesthetic plan can be adapted to the individual patient.

Reanimation is the third listed area of expertise. It relates to the support and stabilization of patients whose vital functions are compromised, which is a core component of anesthesiology and reanimation training in Türkiye. The details of any anesthetic or reanimation care are determined case by case, after a review of the patient's records and a clinical evaluation.

Anesthesia assessment

Perioperative anesthesia management

Reanimation

INTERNATIONAL PATIENTS

Dr. Yavuz speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. For patients coming from abroad, the Acibadem international patient team coordinates the collection of prior reports and imaging, for example MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries.
