CLINICAL FOCUS

A central area of Dr. Öztürk's practice is multidetector CT colonography, also referred to as virtual colonoscopy. This imaging technique uses computed tomography to produce detailed views of the colon and may be considered as part of the evaluation of the large bowel.

Dr. Öztürk also focuses on the imaging of breast diseases. Radiological assessment of the breast can contribute to the characterization of findings and to the planning of further evaluation, in coordination with the treating clinicians.
