Hospital, İstanbul

DEPARTMENT  
Dental & Oral Health

## CLINICAL FOCUS

Dr. Keskin treats a range of periodontal conditions. These include bleeding gums, gum disease, gum abscesses, gum recession, oral sores and bad breath. He also manages peri-implantitis, an inflammatory condition affecting the tissues around dental implants, and performs professional tartar removal as part of periodontal care.

His practice also covers gum aesthetics. This includes laser gum treatment and the use of Botox for a gummy smile, in which an excessive amount of gum tissue is visible when smiling. Whether such options are appropriate is assessed individually and depends on the patient's gum health and overall dental condition.

Peri-implantitis treatment   Laser gum treatment   Bleeding gums  
Gum aesthetics   Gummy smile Botox

## CONDITIONS TREATED

Bleeding gums   Gum abscess   Bad breath   Oral sores  
Gum recession
