CLINICAL FOCUS

Nutrition counselling is the starting point of Müzeyyen Çelik's work. A counseling session typically involves reviewing the patient's current eating habits, medical history and any existing test results, and then discussing realistic dietary goals.

Diabetes nutrition is a particular area of her practice. For people with diabetes, food choices, portion sizes and meal timing can influence blood glucose levels, and dietary advice is generally provided alongside the medical treatment prescribed by the patient's physician. Her dietary recommendations are intended to complement, not replace, medical care, and coordination with the treating physician is part of the process.

INTERNATIONAL PATIENTS

Müzeyyen Çelik consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports, such as laboratory results, discharge summaries and any previous treatment or dietary records, arranges appointments and organizes the hospital visit.
