DEPARTMENT
Internal Medicine

CLINICAL FOCUS

Dr. Ünver evaluates and follows patients with kidney diseases and kidney failure, including patients who require haemodialysis. He assesses findings that may point to a kidney problem, such as proteinuria, haematuria and oedema, and interprets them together with the patient's history and laboratory results.

As an internal medicine physician, he also manages conditions that frequently accompany or contribute to kidney disease, including hypertension, anaemia and obesity. Patients with chronic kidney conditions are followed over time, with treatment adjusted according to laboratory findings and clinical course.

Obesity Hypertension Anaemia Proteinuria Haematuria

CONDITIONS TREATED

Obesity Hypertension Anaemia Proteinuria Haematuria
