Hospital, İstanbul

DEPARTMENT
Neurology

CLINICAL FOCUS

A large part of Dr. Bilici's practice is devoted to headache. She evaluates patients with recurrent or persistent headache, including migraine, with the aim of clarifying the headache type and discussing preventive and acute treatment options that suit the individual patient.

Sleep disorders form a second focus. Dr. Bilici uses polysomnography (overnight sleep testing) as part of the work-up of patients whose symptoms suggest a sleep-related disorder, and she interprets the findings together with the clinical picture.
