Hospital, İstanbul

DEPARTMENT
Neurosurgery

CLINICAL FOCUS

Dr. Pamir's clinical work covers general neurosurgery together with stereotactic neurosurgery and functional neurosurgery, approaches that use image-guided targeting to reach defined structures in the brain. A further area of his practice is Gamma Knife radiosurgery, a non-invasive form of focused radiation treatment.

Whether a given condition is suitable for surgery, radiosurgery or another approach depends on the individual case, and Dr. Pamir reviews each patient's imaging and history before discussing possible options.
