CLINICAL FOCUS

A large part of Dr. Türker's work involves the replacement of missing teeth. She places dental implants, including full-arch All-on-4 and All-on-6 treatment, and performs the preparatory procedures that may be needed when bone volume is limited, such as sinus lifting and bone grafting.

Her surgical interests extend to jaw fracture surgery and orthognathic surgery for jaw retrusion. For patients who grind or clench their teeth, she offers bruxism treatment with Botox and night guard therapy, and she treats trismus, the restricted opening of the mouth.

Jaw fracture surgery
