CLINICAL FOCUS

A large part of Dr. Özdemir's practice concerns the lens and the refractive state of the eye. He evaluates and treats cataracts and discusses intraocular lens options, including smart lenses, where these are appropriate for the individual patient.

His retinal work covers retinal tears, retinal detachment, and macular degeneration. In neuro-ophthalmology, he sees patients whose visual symptoms may relate to the optic nerve or the visual pathways rather than to the eye itself, and he also evaluates eyelid ptosis.
