CLINICAL FOCUS

Dr. Aydınli evaluates and manages a broad range of childhood neurological disorders. A central part of her practice is pediatric epilepsy, alongside febrile seizures, which are among the more common reasons children are referred for neurological assessment.

Her expertise further covers neuromuscular disorders, including myopathies and other muscle and nerve disorders, peripheral nerve disorders, and Guillain-Barré syndrome. She also assesses and manages pediatric spasticity. In each case, the evaluation is adapted to the child's age, developmental stage and medical history, and the available options are discussed with the family.

Neurometabolic disorders

Pediatric spasticity

Febrile seizures

INTERNATIONAL PATIENTS

Dr. Aydınli consults in Turkish and English, and interpreters can be arranged for families who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging, such as MRI, CT or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the hospital visit.
