DEPARTMENT
Gynecology & Obstetrics

CLINICAL FOCUS

Dr. Peker's clinical focus lies in reproductive medicine, with particular attention to diminished ovarian reserve. Evaluation in this area may include AMH assessment, a blood test that is used as one of several indicators when estimating a woman's ovarian reserve.

He also works with women considering egg freezing as a form of fertility preservation. In consultation, Dr. Peker reviews the patient's situation and explains what the process involves, including the assessments that are typically carried out beforehand.

Diminished Ovarian Reserve AMH Assessment Egg Freezing

Vitro fertilization and reproductive medicine center

CONDITIONS TREATED

Diminished ovarian reserve Low ovarian reserve (AMH) Egg freezing
