## CLINICAL FOCUS

A large part of Dr. İncedere's work concerns chronic cardiovascular conditions that require assessment of symptoms, risk factors and cardiac function over time. These include heart failure, coronary artery disease and ischemic heart disease, as well as rheumatic heart disease and the evaluation of heart murmurs.

In the diagnostic evaluation of these conditions, Dr. İncedere may use echocardiography to examine the structure and function of the heart, Holter rhythm monitoring to record heart rhythm over an extended period, and ambulatory blood pressure monitoring to assess blood pressure across the course of a day.
