CLINICAL FOCUS

Pathology is a laboratory-based specialty. Rather than seeing patients at the bedside for most of his work, Dr. Yalçın examines tissue samples obtained through biopsies and surgical procedures, as well as cell samples, in order to reach a pathological diagnosis.

His second area of expertise, tissue analysis, covers the systematic assessment of tissue structure and cellular characteristics. Because the pathology report often forms the basis for subsequent decisions by surgeons, oncologists and other specialists, careful correlation between the microscopic findings, the clinical history and any prior investigations is a central part of his work.

Pathological diagnosis

Tissue analysis

INTERNATIONAL PATIENTS

Dr. Yalçın speaks Turkish and English. For international patients, the Acibadem international patient team coordinates the collection of prior reports and imaging, for example MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, arranges appointments and organizes the hospital visit.
