CLINICAL FOCUS

Dr. Altıntaş evaluates and treats a range of pediatric and adult eye conditions. In pediatric ophthalmology, her work includes strabismus (misalignment of the eyes) and amblyopia, a reduction in vision in one eye that typically develops in childhood.

Her adult practice includes glaucoma, cataract, and blepharitis, an inflammation of the eyelid margins. Within neuro-ophthalmology, she sees patients with visual symptoms that may relate to the optic nerve or visual pathways, including ocular migraine and eyelid myokymia, an involuntary twitching of the eyelid.
