CLINICAL FOCUS

A substantial part of Dr. Oktay's work concerns refractive errors, including myopia, hyperopia, and astigmatism. He also assesses and manages conditions affecting the surface and outer structures of the eye, such as conjunctivitis, blepharitis, and eye allergy, as well as uveitis, an inflammatory condition inside the eye.

Dr. Oktay's areas of expertise also include pediatric eye diseases. He evaluates children with strabismus and amblyopia, conditions in which early assessment can be relevant to how vision develops. In addition, he sees adults and children with drooping eyelids and has an interest in blepharoplasty, the surgical correction of the eyelids.

INTERNATIONAL PATIENTS

Dr. Oktay consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging, for example previous eye examination records, laboratory results, operative notes, and discharge summaries, and arranges appointments and the visit to the clinic.
