CLINICAL FOCUS

Dr. Doğan's clinical work covers general pediatrics and neonatology. In neonatology she is involved in the assessment and care of newborns, including infants who need neonatal intensive care. This may include preterm infants and newborns with conditions that require close monitoring and support in the first days and weeks of life.

Within pediatrics, she sees children for a range of newborn health concerns. Each infant is evaluated individually, and the appropriate approach depends on the child's clinical condition, gestational age at birth and any previous findings.
