Acibadem Taksim Hospital, İstanbul

DEPARTMENT
Neurosurgery

CLINICAL FOCUS

A central part of Dr. Sabancı's work is the surgical treatment of movement disorders. He evaluates and treats patients with essential tremor and dystonic tremor, and he performs deep brain stimulation, which may be considered for selected patients with Parkinson's disease and other movement disorders after careful assessment.

His expertise further extends to brain tumours, brain haemorrhage, hydrocephalus (including congenital hydrocephalus) and pituitary disorder treatment. For patients with seizures that do not respond adequately to medical epilepsy treatment, he evaluates candidacy for epilepsy surgery.

Essential tremor Dystonic tremor Movement disorder treatment
Brain haemorrhage Deep brain stimulation

CONDITIONS TREATED

Essential tremor Dystonic tremor Movement disorder treatment
Brain haemorrhage Brain tumours
