CLINICAL FOCUS

Dr. Uslu's practice is focused on restorative dental treatment. In general terms, this area of dentistry is concerned with restoring teeth that have been affected by decay, wear or damage, with the aim of preserving remaining tooth structure and supporting normal function.

Each patient's situation is different, and the type of restoration that may be considered depends on the condition of the tooth, the surrounding tissues and the patient's overall dental health. Dr. Uslu discusses the available options with the patient so that decisions about care can be made on the basis of the clinical findings.

Dental restorations

Restorative dental treatment

INTERNATIONAL PATIENTS

Dr. Uslu consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging, for example dental X-rays, CT reports, laboratory results, treatment notes and discharge summaries, and arranges appointments and the hospital visit.
