CLINICAL FOCUS

Dr. Özgüven provides trauma care and burn treatment, two of the most common reasons for an emergency presentation. In trauma, this involves an initial assessment of the injured patient, identification of injuries that may threaten life or function, and stabilization before any further treatment is planned.

Toxicology is among her listed areas of expertise, covering the assessment and management of patients who have been exposed to a toxic substance, whether by ingestion, inhalation or contact. Her work further includes environmental emergencies, a group of conditions caused by external factors such as heat, cold or exposure to animals.

Environmental Emergencies

Drowning-Related Acute Hypoxia

INTERNATIONAL PATIENTS

Dr. Özgüven consults in Turkish and English, so an international patient can communicate with her directly in either language; interpreters can be arranged for patients who speak other languages. The international patient team coordinates the collection of prior reports and imaging, for example CT, X-ray or ultrasound reports, laboratory results, operative notes and discharge summaries,...
