İstanbul

DEPARTMENT
Endocrinology &
Metabolism

CLINICAL FOCUS

Dr. Serter evaluates and manages diabetes and a range of endocrine and metabolic diseases. His background in internal medicine informs the assessment of patients whose metabolic conditions coexist with other medical problems.

He also sees patients with obesity, where evaluation considers weight-related metabolic factors alongside the patient's overall health. Treatment planning is based on the individual clinical picture, and the appropriate approach is determined after examination and review of the relevant test results.
