DEPARTMENT
Cardiology Department

CLINICAL FOCUS

A large part of Dr. Sağ's practice concerns coronary artery disease and its consequences, including ischemic heart disease, angina and myocardial infarction. He evaluates patients with atherosclerosis and uses angiography to define the extent and location of coronary narrowing when this is clinically indicated.

Dr. Sağ also cares for patients with heart failure and myocarditis, and for those who need ongoing pacemaker care. Blood pressure disorders form another part of his work: he manages both hypertension and hypotension, adjusting treatment over time according to measurements and the patient's response.
