Hospital, İstanbul

DEPARTMENT
Cardiology Department

CLINICAL FOCUS

A large part of Dr. Satılmış's practice concerns coronary artery disease, including atherosclerosis, angina and heart attack. Assessment may involve coronary angiography to visualize the coronary arteries, and, where indicated, percutaneous coronary intervention to open narrowed or blocked vessels.

In the field of structural heart disease, Dr. Satılmış performs TAVI (transcatheter aortic valve implantation) and manages patients with mitral valve insufficiency. He also follows patients with heart failure, adjusting treatment over time as symptoms and heart function change.
