## CLINICAL FOCUS

Sefa Porsuk's practice is concerned with the assessment of hearing. Patients who notice a change in their hearing, who have difficulty following conversation, or who have been referred by an ENT physician for testing may be seen for an audiological assessment. This typically involves a structured hearing evaluation, the results of which help the treating team understand the type and degree of any hearing impairment present.

Audiologic rehabilitation is the other main area of his work. This refers to the support offered to patients living with hearing impairment, with the aim of helping them make use of their remaining hearing and communicate more comfortably in daily life. The approach is tailored to the individual patient's assessment results and needs.

## INTERNATIONAL PATIENTS

Sefa Porsuk consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports, such as earlier hearing test results, imaging reports, laboratory results and discharge summaries, and arranges the appointment and the hospital visit.
