CLINICAL FOCUS

Dr. Alponat's areas of expertise include tissue pathology, cytopathology and diagnostic pathology. In tissue pathology, samples obtained from the patient are processed and examined under the microscope so that the structure of the tissue and any changes within it can be described.

The pathology report is a central document for the physicians who care for the patient. It is used by the treating team when they discuss the diagnosis and consider possible treatment options. Dr. Alponat's role is therefore largely one of support to that team: her findings inform their decisions, while the treating physicians remain responsible for explaining the results and the next steps to the patient.

INTERNATIONAL PATIENTS

Dr. Alponat communicates in Turkish and English, and interpreters can be arranged for patients who speak other languages. The Acibadem international patient team coordinates the collection of prior reports and imaging, such as MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the hospital visit.
